

FUSION BOOT

THE INTERCHANGABLE ATTACHED DRY SUIT BOOT

Designed to mate with the Fusion Drysuit, the 2 layer Fusion boot sets a new standard in dry-suit comfort and performance.

Features:

- Low profile to fit standard fin pockets.
- Form fit reduces excess air in boots resulting in superior buoyancy control.
- High mobility design results in less fatigue while diving.
- Streamlined design offers less drag reducing your energy output.
- Fast entry and exit.
- Boot sizes can easily be changed by either you or your dealer.

The 2 layer DryCORE advantage

No other drysuit boot can match the mobility of the Fusion Boot. The internal fabric sock is 100% dry and welded to the fusion suit dry core. The external Fusion Boot is made to be durable, highly flexible and streamlined. The two layers are held in place via Velcro fasteners just above the ankle and at the heel. An insole is inserted inside the dry sock as a final lock.

Cross Cut

ONLY AVAILABLE WITH FUSION DRY SUIT

Fusion Boot attaches to dry core via Velcro hook and loop fasteners. Easy and fast to change boot sizes.

Strong Mesh panel allows rapid water drainage between inner dry sock and outer Fusion boot.

Molded fin keep holds your fin strap in place.

Simple non stretch Velcro ankle strap keeps your boot securely on your foot while diving and walking.
